MARINO ROTTIER

Broadly oriented software developer from The Netherlands. Experienced in building desktop and web applications front-to-back. A self-taught programmer with a history in building (graphical) applications for the television broadcasting industry. Passionate about modern UI and CI. Also an experienced drummer, just ask my neighbors!

SKILLS

Development

JavaScript, TypeScript, Python, C++, Rust, C#, Lua, Visual Basic, React.js, Svelte, Node.js, HTML5, CSS, SASS, Tailwind CSS, Webpack, Turborepo, Lerna, Storybook, React Testing Library, Jest, Cypress, MFC, Google Test, Network Protocols, WebSocket, Rest APIs, Dear ImGui, Unreal Engine, Bash, PowerShell, Git, Mermaid, PlantUML, Artifactory

Working Practices

Scrum, Scaled Agile, Technical Investigation, Documentation, Architecture Diagrams, Unit Testing, End-to-End Testing, Continuous Integration, Continuous Delivery, Test-Driven Development, Automation, Prototyping, Mockups

Creative

Drumming, Guitar, Hardware Modding, PC Building, Figma, Photoshop, InDesign, Illustrator, Game Design, Interior Design

Social

Autodidactic, Teamplayer, Sharing is Caring, Eager, Realistic, Analytical, Problem Solver, Extravert, Humorous

EXPERIENCE

EVS Broadcast Equipment (Remote) — 2021 - now

Wokingham, England, United Kingdom

APPLICATION ENGINEER → SOFTWARE ENGINEER

Starting off as an application engineer, I developed control and monitoring applications for major broadcasters like BBC, ITN, and ORF. This also involved setting up the development environment, including version control, deployment workflows, and code documentation, as well as creating a package/module framework for the proprietary scripting language. Transitioning to a software engineering role, I have been working on Cerebrum, a broadcast control and monitoring system. My primary focus: web-based control of the server application using React and TypeScript and extension of the user interface and workflow design application in C++. Additionally, I prototype user interfaces with Figma, work on CI/CD pipelines, and, as part of an interdepartmental UI team, improve and standardize our front-end practices and tools.

C++ · React.js · TypeScript · MFC · CI · Node.js · SASS · WebSocket · REST APIs · Cypress · Git · Jest · Webpack · Lerna · Figma · Google Test · Artifactory · TeamCity · PowerShell

NEP The Netherlands (Hybrid) — 2018 - 2021

Hilversum, The Netherlands

TECHNICAL ARTIST → SOFTWARE ENGINEER

Worked on a C++/Lua-based broadcast control system for virtual production and real-time graphics, used in large-scale TV productions like the Eurovision Song Contest, Extreme E, and Sky News Arabia. This involved implementing third-party protocols (HTTP, WebSockets, raw TCP, and UDP) and creating a GUI framework configurable from Lua, enabling technical artists and operators to quickly compose workspaces and playlists for time-critical broadcasting operations.

C++ · Lua · Dear ImGui · Unreal Engine · Python · C# · Rust · Network Protocols · WebSocket · CI · Git

EMG NL (On-site) — 2016 - 2018

Hilversum, The Netherlands

GRAPHICS OPERATOR → TECHNICAL ARTIST

My broadcasting career began as a graphics operator, where I created, scripted, and operated real-time graphics for live TV productions, from Dutch daily talk shows to international broadcasts. To enhance the company's augmented reality offerings, I transitioned to a technical artist, self-teaching gaming technology principles. In this role, I programmed real-time graphics pipelines and applications for live TV, specializing in virtual production. I developed data-driven augmented reality graphics for several Dutch elections and the 2017 FIFA World Cup coverage on Mediaset in Italy.

Visual Basic · Unreal Engine · Photoshop · XPression

Utrecht University (On-site)

2015 - 2016

Utrecht, The Netherlands

MEDIA DEVELOPER

E-learning (platform/web) development, media management and moderation for the virtual learning environment of Elevate Health, an in-house startup of the Utrecht University that develops an online academy for international health professionals.

HTML5 CSS Moodle Articulate Storyline Adobe Premiere

OOSEOO Internetmarketing (On-site)

2013 - 2014

Amersfoort, The Netherlands

MEDIA DEVELOPER

Audiovisual media development and search engine optimization for an internet marketing agency.

Google AdWords Google Analytics After Effects

EDUCATION

University of Applied Sciences

2013 - 2014

Utrecht, The Netherlands

JOURNALISM

Specialized in television. Member of the Board of Appeals and the Dispute Committee. Not finished.

Grafisch Lyceum

2010 - 2013

Utrecht, The Netherlands

MEDIA MANAGEMENT

Followed the media intermediary specialization, accelerated course. Interned as an online marketeer at a book publisher and a technical producer for the online TV channel of a Dutch national newspaper.
